

To ensure that incoming requests to our laboratories are handled with speed, accuracy and reliability, our operations are structured around four core functional units:

- Sample Preparation Laboratory
- Water and Oil Analysis Laboratory
- Coal, Ash and Gypsum Laboratory
- Sample Storage Room

Our laboratory workflow is managed through a systematic and traceable process:

- Sample acceptance
- Selection of the analysis method according to the sample type
- Conducting the analyses
- Reporting of the analysis results
- Disposal or storage of the analyzed samples
